Tweed-New Haven Airport Launches New Community Engagement Tool for Aircraft and Noise Monitoring

New Haven, CT – Today, Tweed-New Haven Airport (HVN) announced the launch of WebTrak, a new online platform that provides members of the public with real-time access to information on local aircraft activity and noise levels. Designed by Envirosuite, a global leader in environmental intelligence, WebTrak is an innovative tool used by over 60 airports worldwide for public education, helping to increase understanding of airspace operations. The platform is part of HVN's overall investments in community betterment initiatives and its commitment to responsible growth.

Once launched, the online platform's interactive and user-friendly display will show flights, weather, noise monitoring locations, noise level graphs and point of closest approach in relation to a person's particular location. WebTrak also allows residents to register their feedback regarding aircraft noise and activity.

"This move underscores HVN's continued commitment to transparent and open communication with our neighbors," said Michael Jones, CEO of The New HVN. "The launch of Envirosuite's WebTrak marks a significant step forward in providing residents real-time access to important data on local aircraft activity and noise. Alongside our investments in sound insulation, traffic mitigation, and the upcoming residential air quality filtration program, WebTrak further strengthens our commitment to responsible growth."

"The introduction of this new platform aligns with HVN's long-standing mission to be open and accountable to the community," said Robert Reed, Chairman of The Tweed-New Haven Airport Authority. "By providing tools that allow residents to monitor noise levels and track aircraft, we are reinforcing our dedication to transparency. This is not just about technology—it's about fostering trust and building public awareness."

HVN will launch the Webtrack site in December 2024 after holding a community meeting on November 19th with Envirosuite representatives that will be a hands-on educational session on using the site, interpreting data and customizing for individual use.

About HVN

HVN is a regional airport in Southern Connecticut managed and operated by Avports. Founded in 1931, Avports has managed HVN since 1998, providing 26 years of expertise in airport operations. The company is currently developing a new terminal and is committed to a zero-emissions operation. HVN serves over 1 million passengers and over 90 daily operations.
